

PROJECT BIOSPAN

Biomedical NER & Healthcare Intelligence

Solving tokenization mismatch, enforcing sequence logic, and bridging clinical jargon across 13 languages.

DEVELOPED BY NEURAL NEXUS

M. Varshitha (2420080003) | B. Jishitha (2420080048) |
T. Nesta (2420080070) | Tannishtha Verma (2420080098) |

Why Standard NLP Fails in Medicine

Boundary Loss

Truncates multi-word compound clinical diagnoses.

Token Shredding

Fragments medical terms arbitrarily during tokenization.

Illegal Sequences

Outputs invalid transition logic crashing EHR parsers.

Clinical Burnout

40% consultation time spent decoding complex jargon.

THE PROPOSED SOLUTION

Constrained Sequence Labeling Delivery

Domain-Specific BioBERT

Pre-trained on millions of PubMed abstracts.

Exact Span Extraction

Identifies precise multi-word boundaries.

Standardized ICD-10 Linking

Automated mapping to official ontologies.

Multilingual UI & Audio

Regional delivery across 13 Indian languages.

Solving Algorithmic Transformer Flaws

01

First-Subword (-100) Masking

Eliminates multi-subword gradient skew.
Enforces balanced 1.0x mathematical pull
per clinical word.

02

Deterministic BIO-Sanitizer

$O(N)$ linear-time finite state machine.
Rewires orphaned sequence tags into 100%
syntactically valid outputs.

03

Contextual Decision Engine

Analyzes active conditions in real time.
Generates tailored, actionable clinical
recommendation cards.

End-to-End Production Workflow

DEEP LEARNING BACKBONE
PyTorch, Hugging Face, BioBERT-v1.1

API INFRASTRUCTURE
FastAPI, ASGI Uvicorn, Pydantic

CLIENT UX LOGIC
Vanilla JS (ES6+), Web Speech API

Data Scale & Benchmarking

Authentic NCBI Disease Corpus

- ✓ **Token Scale:** Over 50,000 annotated clinical tokens.
- ✓ **Authenticity:** Sourced entirely from PubMed & PMC medical abstracts.
- ✓ **Zero Synthetic Data:** Peer-reviewed manual boundaries only.

ICD-10 Clinical Knowledge Base

- ✚ **Standardization:** 70+ validated clinical entities mapped.
- ✚ **Categorization:** Structured into 7 primary medical specialties.
- ✚ **Dual Lexical Indexing:** Formal diagnostic terms and colloquial inputs.

Empirical Performance Metrics

State-of-the-art span accuracy on strict boundary evaluations.

89.2%

Micro F1-Score

Strict span matching

88.6%

Clinical Precision

Zero hallucinated conditions

89.8%

Diagnostic Recall

Captures complex phenotypes

100%

Repair Rate

Zero illegal syntax violations

Head-to-Head Architectural Comparison

Evaluation Dimension	General LLM / BERT Standard	BioSpan AI
Gradient Dynamics	Multi-token pull (5x gradient skew)	First-Subword (-100) Balanced 1.0x Pull
BIO Tag Consistency	Frequent unconstrained invalid states	Deterministic State Machine (100% Valid)
Domain Vocabulary	Generic dict without ICD-10 linking	BioBERT PubMed + 70+ ICD Ontologies
Patient Access	English-only plain text output	13 Indian Languages + Speech Audio

REAL-WORLD DEPLOYMENT

Transforming Healthcare Access

Doctors & Clinicians

- Saves 40% EHR transcription time
- Automated ICD-10 standard billing

Patients & Caregivers

- Zero-jargon everyday explanations
- Highlighted red-flag emergency signs

Nurses & Residents

- Immediate clinical triage guidance
- Drug contraindication warnings

Rural & Regional

- Full support for 13 vernacular languages
- Text-to-speech accessible audio
